

PPA2116 | Pozidriv XLPR+ screwdriver bit - L25mm - Anti-slip EAD ()

Screwdriver bit with an 8-point cross shape plus 4 thinner secondary points, designed to provide better grip and reduce the risk of slippage (the bit slipping out of the screw). The Pozidriv bit is ideal for powerful and precise screwdriving, particularly in wood or serial assemblies. It offers much better grip than Phillips, provided it is used with the corresponding screw (PZ). AD (High Grip) technology: AD bits offer optimal grip with the screw head, reducing slippage in complex technical applications.
