

Diamond core bit designed for efficient dry core drilling, even in the most demanding materials: concrete, breeze block, hollow brick, solid brick, cellular concrete and porcelain stoneware (class 3). Its drilling depth of up to 154 mm makes it an ideal tool for clean and precise recesses. The factory-sharpened wavy diamond segments offer excellent wear resistance and reduce cutting effort, ensuring a chip-free and clog-free operation.

**Application**

Cinder  
Block

Stone

Brick

Concrete
